

Develop Business Case

Clients may choose CedarCrestone's development solution for multiple reasons. CMS Develop provides access to remote technical consulting resources to handle virtually any kind of E-Business and PeopleSoft development need, whether it be onshore or offshore development. Both may be integrated into any stand-alone development effort or project effort such as an upgrade or implementation.

Develop services are particularly beneficial to clients whose organization is scarce on resources or specific skill sets. Hiring a remote developer would alleviate those issues and allow your team to focus on more progressive IT initiatives within your organization. No longer will it be necessary to spend the money and time developing new objects, modifications, reports, and interfaces; instead, those tasks can be redirected to a hired resource that will have the correct skill sets to get the job done successfully and more cost efficiently.

CedarCrestone's help desk is open 24/7 with resources there to handle all client issues. The client may contact the help desk via phone, email, or an online ticket. At that point, the issue is addressed and assigned to the appropriate individual who will then remotely link to the client's network by VPN or Telnet to deliver a solution. The diagram below displays the entire procedure.

How to know if this is the right solution for your organization:

- Do you have upcoming E-Business and/or PeopleSoft development initiatives that will require third-party support?
- Are you looking for high-quality, economical E-Business and/or PeopleSoft development alternative delivered onshore or offshore?
